Summary

AI & Automation-focused B.Tech (CSE-AIML) student at GLS University (CGPA 9.0+) with hands-on experience in Machine Learning, Deep Learning, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Multi-Agent AI Systems, Computer Vision, and Workflow Automation using n8n. Skilled in building end-to-end AI solutions, intelligent automation systems, and deployment-ready applications using Python, FastAPI, TensorFlow, AWS, and modern development tools.

Technical Skills

Programming:	Python, Java, JavaScript, SQL, PHP, C++, C
Artificial Intelligence:	ML/DL, Computer Vision, LLMs, RAG, Prompt Engineering, Multi-Agent Systems
Frameworks & Libraries:	TensorFlow, Scikit-Learn, OpenCV, FastAPI, Flask, Streamlit, React, Node.js, Express.js
Automation & Tools:	n8n, REST APIs, Webhooks, Git, GitHub, VS Code, Power BI
Databases:	MongoDB, MySQL
Cloud:	AWS (EC2, S3, IAM, Lambda)
Operating Systems:	Linux, Windows

Experience

AI/ML Intern

2025

Conversational Data Analysis with LLMs

- Developed applications using Large Language Models (LLMs) for conversational data analysis.
- Applied prompt engineering and data preprocessing techniques to improve response quality.
- Automated workflows for extracting insights from structured and unstructured datasets.

Projects

Optical-Guided Thermal Image Super-Resolution (SIH 2025)

- Developed a deep learning-based model to enhance low-resolution thermal images using high-resolution RGB images as guidance.
- Implemented dual-stream EDSR architecture with feature fusion and attention mechanisms.
- Designed physics-aware loss function to preserve real-world temperature consistency.
- Achieved high performance with PSNR: 42.4 dB, SSIM: 0.92, and low RMSE.
- Built complete pipeline including preprocessing, model training, and deployment-ready system.

AI-Powered Incident Response Agent (HackBaroda 2026)

- Built a multi-agent AI platform for automated incident investigation and root-cause analysis.
- Developed a RAG-powered knowledge retrieval system leveraging historical incidents.
- Implemented similarity-based incident matching and intelligent remediation recommendations.
- Designed analytics dashboards, investigation history tracking, and organizational learning workflows.
- Built a working prototype within a 12-hour hackathon sprint using Multi-Agent AI, RAG, FastAPI, Vector Search, and DevOps concepts.

AI-Powered Workflow Automation Suite (n8n)

- Developed an end-to-end workflow automation suite using n8n, integrating Gmail, Google Sheets, Telegram, HTTP APIs, Google Maps, and OpenStreetMap.
- Built automated job application tracking, AI-powered job lead scraping, and multi-source business lead intelligence workflows to eliminate manual processes.

- Implemented data extraction, filtering, enrichment, normalization, duplicate removal, website verification, and rule-based opportunity scoring using JavaScript.
- Integrated REST APIs, webhooks, and AI services to automate notifications, reporting, and structured data management across multiple platforms.
- Designed scalable, modular workflows with error handling, scheduling, and reusable components for real-world business automation.

MediScan – Disease Prediction System

- Developed machine learning models for early detection of diseases such as Asthma, Dengue, and Pneumonia.
- Performed data preprocessing, feature engineering, and model evaluation using Python libraries.
- Integrated OCR-based PDF data extraction for automated input processing.
- Built user-friendly interface supporting real-time predictions and manual inputs.

Energy Tracker Dashboard

- Built a full-stack web application using Streamlit and MongoDB for tracking daily energy consumption.
- Designed interactive dashboards using Plotly and Matplotlib for trend analysis and forecasting.
- Implemented authentication system with hashed passwords and session management.
- Enabled CSV and Excel export for reporting and data analysis.

Syntaxt Reviser Gamified Coding Platform (Tech Hackathon)

- Developed an interactive coding practice platform using React, Node.js, and Express.
- Implemented real-time character validation and performance tracking (WPM, accuracy).
- Designed gamification system with virtual rewards and structured learning paths.
- Built scalable backend APIs for real-time data processing.

Education

GLS University <i>B.Tech in Computer Science Engineering (AI/ML) – CGPA: 9.0+ (Top 10%)</i>	2023 – 2027 <i>Ahmedabad, India</i>
Ultravision School <i>HSC (Grade: 90%)</i>	2022 – 2023
Trimurti Ultravision School <i>SSC (Grade: 89%)</i>	2019 – 2020

Certifications

- Oracle AI Foundation Associate
- Deloitte Data Analytics Job Simulation (Forage)
- NPTEL Recommender Systems
- Green Skills and Artificial Intelligence

Achievements

- Selected for Smart India Hackathon (SIH) 2025 (ISRO Problem Statement)
- Participated in HackBaroda 2026 and developed an AI-Powered Incident Response Agent.
- 1st Prize at College Tech Hackathon
- Winner of Code Relay Competition
- Chess: 2nd Place (State Level), 1st Place (College Level)

Languages
